

The RMS Foundation is a non-profit organisation acting as research institute and accredited service laboratory. Our services include material and implant testing, consulting, training as well as technology transfer. Research is focused on orthopedics and osteosynthesis, alone or in cooperation with external partners.

For a new project in the field of «calcium phosphate bone graft substitutes», we are looking for a

(Postdoctoral) Researcher

in a full-time position. The position is limited to 2 years. Start as soon as possible.

Your tasks

Your task will be to study and improve the synthesis of a particular calcium phosphate bone graft substitute. For that purpose, you will have to work very closely with our two industrial partners.

Your knowhow

Since the project is limited to two years, you are expected to bring a strong background in the field of calcium phosphate chemistry. You must be able to work independently (PhD required for this position) and easily communicate in English and possibly also German (written and oral).

What to expect

You will join a multidisciplinary, highly motivated, and competent team. RMS foundation offers very good working conditions. RMS foundation is located in a village of the Swiss plateau, at the southern side of the Jura mountain range, 40 km away from Bern.

We would be pleased to answer any further questions. Please send your application to Dr Marc Bohner, Head of the Skeletal Substitutes Group, by letter or email to marc.bohner@rms-foundation.ch. Deadline: 31st January 2012.
